State Farm® TOYOTA

Improving parents’ and teen drivers’ experience behind the wheel
SAFETY JUST COMES NATURALLY.

Toyota Safety Sense™ is now standard on many new Toyotas.

Now that active safety features like a Pre-Collision System (PCS), Lane Departure Alert (LDA) and others come standard on many new Toyotas – including the all-new Camry – you get extra peace of mind at no extra charge. Toyota Safety Sense™ (TSS). Designed for safety.

Prototype shown with options. Production model may vary. 1. Drivers are responsible for their own safe driving. Always pay attention to your surroundings and drive safely. System effectiveness is dependent on many factors including road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details. 2. The TSS Pre-Collision System is designed to help avoid or reduce the crash speed and damage in certain frontal collisions only. It is not a substitute for safe and attentive driving. System effectiveness is dependent on many factors including road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details. 3. Lane Departure Alert is designed to read visible lane markers under certain conditions, and provide audible and visual alerts when lane departure is detected. It is not a collision-avoidance system or a substitute for safe and attentive driving. Effectiveness is dependent on many factors including road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details. ©2017 Toyota Motor Sales, U.S.A., Inc.
Sponsor message

At Toyota, we have a vision of saving lives and amplifying the message of safe driving to teens, parents and educators. That is why we have partnered with The Parent’s Supervised Driving Program to promote safe driving for your teen and family. At the completion of this learning guide, we hope you and your teen will have a much greater understanding of what it takes to be safe when you get behind the wheel of a motor vehicle.

We all know that driving poses certain risks. For teenagers, however, statistics reveal that the risk of being in a crash is greatest within the first 24 months of driving – higher than any other point in their lives.

As parents, you are the most important influence on your teen driver. By following the information in this guide, you will help teach them about the vehicles we drive, the roads we use, and the serious responsibility of being a driver.

And, while Toyota continues to design and manufacture leading-edge technology to help keep our customers safe, we fully understand that the best safety device in any car is the hands of the driver. That’s you and your teen. So be the driver you want your teen to be, and show them that it’s up to each of us to drive safely.

Enjoy the experience with your teen as you coach them through this guide. And together, Let’s Go Places.
The Big Day has arrived.

A driver’s license is one of life’s biggest milestones. State Farm® is here to help with teen driver programs and additional savings for safe driving. Talk to an agent or get a quote at statefarm.com®.

Like a good neighbor, State Farm is there.®
It seems like you blink, and the next thing you know, that little kid is a teenager getting their driver’s license photo taken. It’s a milestone you’ll always remember, and one where the emotions of parenthood – pride, anticipation, worry and more – all come together.

As the nation’s leading auto insurer¹, State Farm® wants to help make this milestone a safe and positive one. Car accidents are the #1 cause of death among teens², and the first few months of unsupervised driving are the most dangerous. It’s why we’re involved with The Parent’s Supervised Driving Program, and why we’ve made significant, long-term investments in research and programs to help teens adjust to their newfound freedom.

Teen drivers need and want their parents involved in their development. We encourage you to read this program guide and know the example you set makes a difference in your teen’s safety.

State Farm and our 19,000 agents across the country are here to help. Together, we want to make this milestone one to celebrate for your family.

Driving lessons don’t just happen on the road.

With more than 800,000 licensed teen drivers in the state of Florida, it is important to teach your child about safe driving.

Download the official Florida Driver License Handbook at: flhsmv.gov/handbooks
LOG YOUR DRIVES.
FOCUS ON YOUR TEEN.

Teaching your teen to drive presents enough challenges. With RoadReady, your focus can remain where it needs to be: on your teen and on the road. “Start a New Drive” and RoadReady will log the rest. Download your log to verify you’ve completed your state requirement.

Welcome parents of teen drivers!

The Parent’s Supervised Driving Program is a resource for parents to utilize when teaching their teen to drive.

1. This program is divided into core driving skills.

- Read through each section at home before your teen starts a new skill.

2. Log your driving time. This can be done 2 ways:

- Carry this printed guide with you during the drive and use the printed log section – you or your teen can log the supervised driving hours once the drive is finished.

- Download and use the free RoadReady® app to track your driving time. RoadReady tracks your teen’s driving hours until you reach the state requirements.

About this program

Developed by Safe Roads Alliance, a non-profit dedicated to promoting safer driving through education for drivers of all ages, The Parent’s Supervised Driving Program is designed to improve teen driver safety by providing parents and guardians with a methodical approach to teaching the requisite driving skills. Each lesson concentrates on a particular sequential skill. Parents are in the best position to help their teens become safe, smart, and skilled drivers.

The Parent’s Supervised Driving Program also includes a website, social media pages, and a mobile app, RoadReady®.

About supervising teen drivers

The Parent’s Supervised Driving Program gives you a simple, easy-to-follow plan you can use to help your teen be a safe and responsible driver.

Some thoughts as you begin this exciting experience together:

Make an effort to enjoy the learning process: Driving is a big step toward independence, and your teen is entering a new phase of life. You’ll both remember this experience for years to come. Make it a good memory!

Practice makes perfect: Studies show that the risk of a crash diminishes with experience. The more time you can spend driving with your teen, the less likely it will be that they’ll crash when they begin driving alone. Driving in a variety of circumstances is equally important. While using this program, you should drive on all types of roads. Make sure your teen gets exposure to a variety of roadways, and in different conditions as well: at night; in rain, fog; and in heavy and light traffic.

Be a driving role model: It’s not enough to say, “Do as I say.” Children imitate their parents'/guardians’ behavior, so your driving should set a good example for your teen to emulate. Be sure that you:
  - Obey all traffic laws.
  - Correct any unsafe driving habits (driving aggressively, rolling through stop signs, accelerating through yellow lights, speeding, etc.).
  - Refrain from using your cell phone at all while driving.
  - Always wear your seat belt, and remind your teen that buckling up is the law. This will need to be an ongoing conversation - buckle up every trip, every time.

Tips for teaching your teen

  - Seat belts must always be worn properly by everyone in the vehicle.
  - Before each session, discuss the goals of the day’s lesson.
  - Before each new lesson, review what was learned during the previous lesson.
  - Keep instructions simple and concise. Say where to go and what action to take. For example: “Drive to the corner and turn right.”
  - The feedback you give should be calm, precise, and immediate. Be patient and alert at all times. Remember to give positive feedback when your teen succeeds!
  - When your teen makes a mistake, which will happen often, do not criticize. Remain calm and simply repeat the maneuver until it’s done correctly. To minimize their frustration, emphasize to your teen that mistakes are a normal part of learning.
  - These lessons should be consistent with what is taught by your teen’s driving instructor. If you teach something differently, your teen will be confused and learning will be more difficult. If the lessons in this program are different from the instructor’s, contact them to clarify the discrepancy.
  - Remember that students learn at different paces. Make sure your teen has mastered each skill before you move on to the next lesson, even if that means repeating a lesson several times. Patience and practice will pay off in the long run.
  - Integrate night driving into as many lessons as possible.

Note: Your teen can only drive during daylight hours the first three months of the Learner’s License. After that, they may drive until 10pm. They must be supervised by a licensed driver over the age of 21 at all times while driving.

Most importantly, make sure the vehicle you use for training is safe. Confirm that the brakes have been recently inspected, and check to make sure the tires have sufficient tread depth. It’s generally recommended that you do not train in larger vehicles that lack stability control.

Check your emotions

At the start of each driving lesson with your teen, leave your problems behind — and make an effort to stay focused. Don’t bring up touchy subjects such as grades, homework, boyfriends/girlfriends, and anything else that might distract either of you from the task at hand.
Vehicle control for supervisors

Teaching a new driver can be stressful, but knowing you have some control can help. Professional driver’s education instructors are taught emergency responses to potential hazards that can crop up with an inexperienced driver behind the wheel. Here are some skills you can learn to help you maintain control from the passenger seat while teaching:

Emergency shifting: In a quiet, large, level, empty area, practice shifting the transmission from drive to neutral.

Taking the wheel: With an experienced driver in the driver’s seat, in a quiet, large, level, empty area, practice steering the car with your left hand from the passenger seat.

Mirrors: Adjust the mirror on the passenger sun visor so you can use it as a rearview mirror. If the right side mirror is properly adjusted, you can use it to monitor traffic to the rear from the passenger seat.

Awareness: Never assume everything is okay. Always check and re-check traffic and your teen’s actions.

Emergency stopping: Practice stopping the car with the parking brake (if your vehicle’s parking brake is located between the seats). This can be dangerous, even at low speeds, and should only be used as a last resort.

Driving has changed

Chances are, today’s cars are not the same as they were when you learned to drive. To teach your teen effectively, you need to know about a few important recent changes in how cars work, how we drive, and how driving is taught.

Anti-lock Brake System (ABS): Most newer cars offer ABS as standard equipment. ABS is a dramatic safety improvement that works by letting the tires rotate, rather than lock up, when the brake is engaged. This allows drivers to turn the car in an emergency stop. ABS should be used with firm, continuous pressure. The brakes may shake and grind when applied, which often concerns users – but this is a normal function of ABS. To find out if your car has ABS, check the instrument panel after you turn on the ignition or read the owner’s manual.

Note: When driving a car without ABS, the old rules still apply. Don’t “slam” the brakes. Rather, pump the brake pedal firmly. The intention is to stop quickly, but also to avoid locking the brakes and skidding. Skidding causes a loss of control and requires more distance to stop.

Air bags: Air bags are designed to work with seat belts, which must be worn for the air bags to be effective. The use of a safety belt allows the driver to stay behind the wheel in order to take advantage of the airbag. Since air bags deploy out of the wheel on impact, it’s important to keep your hands and arms in the recommended position.

Steering wheel hand position: Most of us were taught to position our hands at 10 and 2 o’clock on the steering wheel. It’s now suggested that you hold the wheel at 9 and 3 o’clock or 8 and 4 o’clock. This gives you better vehicle control and also lessens the risk of injury if the airbag was to deploy.
Distracted driving involves any activity that takes the driver’s attention away from the primary task of driving. Distracted driving, impairment, speeding, and not wearing seat belts are all risky choices that can lead to serious injury and death. Teens, who are still learning the complex skills of driving, are particularly susceptible to distractions while behind the wheel. Don’t let you or your teen become another statistic.

Here are the facts from Distraction.gov (Official US government website for distracted driving):

• Motor vehicle crashes are the leading cause of death for U.S. teens. Mile for mile, teens ages 16-19 are involved in 3 times as many fatal crashes as all other drivers. And 1 in 3 teens who text say they have done so while driving.

• In 2017 across the United States, 3,166 people were killed in a distraction-related crash, with teens having the highest rate of distracted driving crashes causing a fatality. In 2016, an estimated 434,000 people were injured in crashes involving a distracted driver. (NHTSA)

• A Virginia Tech Transportation Institute study revealed that physically dialing a phone while driving increases the risk of a crash as much as 6 times. Texting is riskier still, increasing collision risk by 23 times.

• A recent AAA study shows that when a teen driver is carrying teen passengers, the fatality rate for occupants of other cars increases 56 percent; for pedestrians and cyclists it increases 17 percent; and for the teen driver, the fatality rate increases 45 percent.

To combat this growing epidemic, we suggest the following:

• Set a good example: Kids observe and learn from their parents. Put your phone away while driving and only use it when you are safely pulled over. According to the Pew Research Center, 40 percent of teens aged 12 to 17 say they have been in a car when the driver used a cell phone in a way that put themselves and others in danger.

• Talk to your teen: Discuss the risks and responsibilities of driving and the danger of dividing their attention between a phone call and the road. Show them the statistics related to distracted driving and urge them to share what they learn with their friends. Encourage them to speak up if they are a passenger in a car with a distracted driver.

• Establish ground rules: Set up family rules about not using the phone or other electronic devices while behind the wheel. Enforce the limits set by the graduated licensing program.

• Sign a pledge: Have your teen take action by agreeing to a family contract about wearing safety belts, not speeding, not driving after drinking or using any drugs, and not using a cell phone behind the wheel. Agree on penalties for violating the pledge, including paying for tickets or loss of driving privileges.

• Other dangerous distractions: In addition to cell phone use, distracted driving can include eating, grooming, drinking, listening to or adjusting the radio or MP3 player, using the GPS, talking to passengers, or watching a video, just to name a few activities. Inexperienced drivers are particularly susceptible to these kinds of distractions.

Drugged driving

As more and more states legalize marijuana, it’s important to remember that just because it’s legal doesn’t mean it’s safe. Laws for operating under the influence of alcohol also apply to drugs. Almost any drug can affect your driving skills, including illegal drugs, prescription medicine, and even over-the-counter medicine. Smoking or ingesting marijuana makes it more difficult to respond to sights and sounds. This makes you dangerous as a driver; it lowers your ability to handle a quick series of tasks. The most serious problems occur when facing an unexpected event, such as a car coming out from a side street or a child running out between parked cars. These challenges get worse after dark, because marijuana can also limit night vision.
Before you start the engine

**Goal:** Teach your teen vehicle basics before actual driving begins.

**Location:** Parked. This is a non-driving lesson.

Lesson one – touring the vehicle
Walk around the outside of the car with your teen. Instruct them to look for leaks and hazards such as broken glass, and to make sure it’s clear behind the vehicle as well as in front of the vehicle.

Have your teen practice these basic skills until they don’t need help:
- Starting and stopping the engine
- Naming and operating all dashboard controls
- Checking oil level
- Checking wiper fluid
- Checking tire pressure
- Checking tire tread depth

Lesson two – mirror settings
The method below provides the best view of adjacent lanes, for maximum safety.
- **Inside mirror:** Have your teen sit up straight in the driver’s seat and adjust the inside mirror so that it frames the entire rear window. This is the main mirror for viewing what is behind the vehicle.
- **Left-side mirror:** Have your teen lean their head toward the left-side window, and set the left mirror so they can barely see the side of the car. When they sit up straight, the car should no longer be visible in the mirror.
- **Right-side mirror:** Do the same to the right. Have your teen lean to the right over the car’s center console, and set the right mirror so they can barely see the right side of the car.

Lesson three – checking blind spots
Additionally, teach your teen how to look over their shoulder to check the “blind spot” on each side of the car that cannot be seen in the mirrors.

Lesson four – seating position
A proper seat position is critical to maintaining control of the vehicle. Your teen should sit with their back firmly against the seat. There should be at least 10 inches between the steering wheel and the driver’s chest, with the air bag pointing at the chest. The top of the steering wheel should be no higher than the shoulders. Move the seat forward or backward so that the driver’s heel touches the floor and can pivot quickly between the brake and accelerator. Shorter drivers may need a seat cushion or pedal extenders to sit safely 10 inches from the air bag. The head restraint should be at the center of the driver’s head.

Lesson five – proper footwear
Wearing the right shoes has an effect on operating a vehicle. Flip flops are dangerous to wear while driving, so encourage your teen to wear shoes that have a flat sole and a back. Driving barefoot is unsafe as well. Keep an extra pair of shoes in the car so your teen can remember to wear the proper shoes while driving. If they need to brake suddenly, the wrong footwear can make for an unsafe situation.

**The most effective way to deal with blind spots is to briefly turn and look.**
SKILL TWO: MOVING, STEERING, AND STOPPING

Moving, steering, and stopping

**Goal:** Teach your teen to consistently start, stop, and turn smoothly with full vehicle control.

**Location:** A large, level, mostly empty area.

Everyone in the vehicle **must** be properly buckled up.

Before starting, coach your teen to always signal and check mirrors and blind spots before changing the speed, position, or direction of the car. Remind them when needed.

Have your teen drive around the perimeter of the lot several times at a slow speed. Have them stop and start frequently, practicing smooth hand-to-hand steering, braking, and accelerating.

Pick several targets in the large, level, empty practice area, and have your teen drive to them at specific speeds. For example, “Drive to the stop sign at 15 mph.” Focus on steady speed and smooth starts and stops.

Once your teen is braking smoothly, practice “hard, smooth stops” at slightly higher speeds (approximately 25–30 mph). **Hint:** Curling toes back just before braking results in smoother stops. It eases the pressure on the brake.

**Lesson one – steps toward turning**

**Turning right**

1. **Step 1**
   - Left hand slides down
   - Right hand pulls down
   - Left hand pulls down
   - Right hand slides down

2. **Step 2**
   - Left hand pushes up
   - Right hand slides up
   - Left hand slides up
   - Right hand pushes up

3. **Step 3**
   - Left hand slides down
   - Right hand pulls down
   - Left hand pulls down
   - Right hand slides down

*With hand-to-hand steering your hands do not cross each other.*

**Turning left**

1. **Step 1**
   - Left hand slides down
   - Right hand pulls down
   - Left hand pulls down
   - Right hand slides down

2. **Step 2**
   - Left hand pushes up
   - Right hand slides up
   - Left hand slides up
   - Right hand pushes up

3. **Step 3**
   - Left hand slides down
   - Right hand pulls down
   - Left hand pulls down
   - Right hand slides down

**Lesson two – turning techniques**

- Ease off the accelerator or use the brake to reduce speed before entering a curve; use gentle acceleration to overcome inertia and pull the vehicle out of the curve.
- Use smooth, continuous steering wheel movements when approaching a turn and when returning (sliding) the wheel through the hands until the vehicle is in the proper post-turn position.
- Coach your teen to pick a target near the center of the intended travel path. This target can be used as a visual aid to aim at while steering through turns.

Controlling speed

New drivers tend to use the brake too much and the accelerator too little to control speed. Coach your teen about easing up on the gas pedal as a way to reduce the car’s speed.
How close are you?

Goal: Teach your teen how to tell where their vehicle is in relation to other vehicles or objects.

Location: A large, level, mostly empty area with clearly painted pavement lines and curbs.

Reference points

Explain to your teen that reference points are visual guides to help them judge the car’s distance from curbs, lines, other objects, and vehicles.

Lesson one – driver’s side curb (or line)

• Choose a pavement curb (or line), and tell your teen that the goal is to pull the driver’s side of the vehicle 6–12 inches away. Coach them to slowly pull up parallel to the line, getting gradually closer, and stop when they think they are 6–12 inches away. Have them look at where the line intersects in the front window.

• Have your teen put the car in park and get out to check if the driver’s side wheels are 6–12 inches from the line. If it’s not the right distance, have them do it again, checking the reference points.

• Note: You must park in the direction of traffic. Always park on the right side of the road, unless it is a one-way street.

View out the front windshield. Reference points will be different for everyone, depending on the vehicle and the height of the driver.

Lesson two – passenger’s side curb (or line)

• Choose another curb (or line) parallel to the passenger’s side, again pulling up slowly to within 6–12 inches. Use the same gradual pull-up method, but for this side, coach your teen to stop when the curb appears to intersect the center of the hood.

• Again, have your teen get out of the vehicle to check whether the tires are 6–12 inches from the curb. Keep practicing and making adjustments, noticing the reference point, until they can do it consistently.

• Note: You must park in the direction of traffic. Always park on the right side of the road, unless it is a one-way street.

View out the front windshield. Reference points will be different for everyone, depending on the vehicle and the height of the driver.

Lesson three – front curb (or line)

• Teach your teen to align the front bumper between 6–12 inches from a pavement curb (or line). Have them drive slowly straight toward the curb. Coach them to stop when the curb appears under the passenger’s side mirror.

• Have your teen get out of the vehicle to check whether the front bumper is 6–12 inches from the curb. If not, have them adjust the reference point as needed and keep practicing.

View out the driver’s side window. Reference points will be different for everyone, depending on the vehicle and the height of the driver.

Making your teen safer

It takes more than 15 minutes every day for 6 months to complete 50 hours of practice driving. For 100 hours, it’s more than 30 minutes a day for 6 months. Studies show that the more time you drive together, the safer your teen will be when driving alone.

Backing up

**Goal:** Teach your teen how to safely drive backwards in a straight line and while turning.

**Location:** A large, level, mostly empty area.

**Lesson one – before moving the vehicle**
- Coach your teen that they must turn around and look backwards through the rear window when backing up. Using mirrors or backup cameras doesn’t give a full view.
- Have your teen shift their hips and turn around until they get a good view behind the vehicle. They should drape their right arm over the back of the seat and grasp the top of the steering wheel with their left hand.

**Lesson two – backing up in a straight line**
- Check all areas behind the vehicle prior to and while backing up.
- Grasp the steering wheel with the left hand and look over the right shoulder through the rear window.
- First release the brake, then use the accelerator gently, and only when necessary, to control speed. Keep it slow.

**Lesson three – backing up in a turn**
- As a general note, when you back the vehicle up and you are properly positioned in the driver seat, with your left hand on the steering wheel at the 12 o’clock position, the way you move your hand is the way that the rear of the vehicle will move.
- Look in the direction the car is moving through the rear side windows.
- Back into the turn slowly, first releasing the brake, then using the accelerator if needed.

**Lesson four – aligning rear bumper to a curb**
- Choose a curb (or line) for a target.
- Have your teen back up toward the target, coaching them to stop when the curb appears near the middle of the rear right window when looking over their right shoulder.
- Have your teen set the emergency brake and put the car in park.
- Have your teen get out of the car to see whether the rear bumper is close to the target.
- If adjustments are needed, have your teen try again, establishing a new reference point. Repeat as often as needed until your teen can consistently come within close proximity to the target.

---

Slow and consistent
Emphasize that backing up must be done at slow but consistent speeds. It’s harder to maintain control of the car when it’s in reverse.

---

**Skill completed**

#RoadReady
Driving on a quiet street – part one

**Goal:** Teach your teen to move and stop a vehicle safely and with confidence on quiet roads.

**Location:** Start in a large, level, mostly empty area. Move to a quiet neighborhood street when indicated. Out of respect to our neighbors, please do not use official state road test courses for practice.

Before moving out onto the road, make sure that your teen has reviewed the driver’s manual and is familiar with street signs, signals, pavement markings, yield and speed laws.

**Skill review**

Starting in a quiet, large, level, empty area, review the skills learned so far. Have your teen drive several laps around the lot, practicing smooth braking and accelerating, maintaining steady speeds, steering into right and left turns, and using reference points to align the car with curbs (or lines).

**Lesson one – commentary driving**

Coach your teen to use “commentary driving” (see sidebar on page 2) throughout this lesson, if possible.

**Lesson two – lane position**

When you and your teen feel ready, move to a quiet street.

With your teen behind the wheel, first have them practice driving straight in three different lane positions. Do this for several miles, practicing each position at least 10 times:

**Center position 1:** The most common position, with the vehicle centered within the lane. Coach your teen that they should stay in the center position under most circumstances.

**Left position 2:** The vehicle positioned to the left side of the lane. This is best used when approaching parked vehicles and potential hazards on the right (if no oncoming traffic). It should be avoided on a hill or a curve.

**Right position 3:** The vehicle positioned to the right side of the lane. This is usually done when making a right turn to allow for a safety margin on the left side of the vehicle.

**Lesson three – intersections**

Coach your teen on these techniques for safely approaching an intersection:

- Search for vehicles, pedestrians, signs, and traffic signals.
- Check the rearview mirror for any potential hazards behind the car.
- If it’s an intersection with traffic signals, identify who has the green light.
- If turning, put on the turn signal 100 feet before making the turn.
- If a stop is required, stop behind the white stop line.
- Select the best lane for the intended direction of travel.
- Yield the right-of-way to pedestrians and other vehicles.

Emergency vehicles

Florida law requires you to [Move Over] a lane for these vehicles that are stopped on the roadside helping motorists or providing services: Law Enforcement; Emergency Rescue; Ambulance; Fire Truck; Garbage and Sanitation; Public Utility; Wrecker/Tow Truck.

If you can’t move over — or when on a two-lane road — slow to a speed that is 20 mph less than the posted speed limit. Slow down to 5 mph when the posted speed limit is 20 mph or less.

**Skill completed**

---

supervisor initials

driver initials

#RoadReady
Driving on a quiet street – part two

Goal: Teach your teen to turn both right and left safely and with confidence on quiet roads.
Location: A quiet block of single-lane roads, ideally without traffic signals at the intersections.

Lesson one – right turns

When your teen is comfortable with lane positions and intersections, it’s time to practice turns. Start with right turns. Have your teen drive clockwise around the block 10–12 times:

• Pick a line at the center of the intended travel path while steering through a turn. Make sure your teen does not fixate on one specific spot, but instead focuses on a broader path.
• Focus on smooth braking into the turn and acceleration out of the turn, as previously practiced in the large, level, empty area.
• Always check mirrors before turns and signal at least 100 ft. before you make your turn.

Lesson two – left turns

When your teen is proficient at right turns, move on to left turns. Have your teen drive counterclockwise around the block 10–12 times, coaching them on these techniques for safe left turns:

• Position the vehicle close to the yellow line in the middle of the road.
• If there is a stop sign or red light, stop with wheels pointed straight ahead before the stop line, crosswalk or intersection. If your wheels are turned, you could be pushed into oncoming traffic, if you are struck from behind.
• Search the intersection in all directions for vehicles, pedestrians, signs, and signals.
• Select a gap in traffic and pull straight forward toward the middle of the intersection. Coach your teen to avoid hesitating.
• Choose a steering path in the middle of the lane to the right of the yellow line. Turn into the travel lane closest to the yellow line.
• When the turn is complete, let the steering wheel slide back through the hands.
• Pick a new target 15–20 seconds ahead in the center of the travel path and accelerate gradually.

Focus ahead

Most drivers have a tendency to steer in the direction they look. If their eyes move to one side, the car may drift in that direction, too. Remind your teen to focus on a path line in the middle of their travel lane — and not fixate on lane lines or other objects. The rest of the area should be scanned quickly but frequently.

Certification of driving experience of a minor

I do hereby certify that ____________________________________________, a minor, First Middle Last
date of birth ______________________ has driven a minimum of 50 hours during the past 12 months, of which 10 hours of driving were at night per Section 322.05(3), Florida Statutes.

____________________________________________________________  _______________________________________
Signature of Parent, Legal Guardian, or Responsible Adult          Print Name

STATE OF FLORIDA COUNTY OF __________________________________________

Sworn to (or affirmed) and subscribed before me this ______ day of ____________________________, 20____, by ________________________________________________ who is personally known to me or produced identification ________________________________________________ as proof of identification.

Identification type and number

____________________________________________________________
Notary Public or Driver License Examiner-Signature

____________________________________________________________
Print, Type or Stamp Commissioned Name of Notary Public

INSTRUCTIONS:
1. One parent, legal guardian or other responsible adult over 21 years of age must sign this form.
2. All signatures must be notarized or witnessed by an examiner.
Learner’s License restrictions

With your Learner’s License, you may:

Only drive during daylight hours during the first three months and until 10 p.m. thereafter, and always with a valid licensed driver who is at least 21 years old and occupies the front passenger seat.

Driver License restrictions for minors

Driver License (16 and 17 years old)

To earn a Driver License, you must be at least 16 years old AND have held a learner’s license for at least one year without any traffic convictions.

You must provide:

- A Florida Learner’s License or a license from another jurisdiction.
- Parent or guardian certification that you have at least 50 hours of behind-the-wheel driving experience, of which 10 hours must be at night.

You are required to take:

- A driving test and perform certain driving maneuvers. Please refer to the Florida Driver Handbook for specifics or present a waiver from an accepted driver education course. You are required to have a current registration and proof of vehicle insurance at the driving test.

With your Driver License, you may:

- 16 years old - only drive between 6 a.m. and 11 p.m., unless accompanied by a valid licensed driver who is at least 21 years old and occupies the front passenger seat, or if you are traveling to or from work.
- 17 years old - only drive between 5 a.m. and 1 a.m., unless accompanied by a valid licensed driver who is at least 21 years old and occupies the front passenger seat, or if you are traveling to or from work.
Redefining what it means to feel safe.

Prototype shown with options. Production model may vary. Drivers are responsible for their own safe driving. Always pay attention to your surroundings and drive safely. Depending on the conditions of roads, weather and the vehicle, the system(s) may not work as intended. See Owner’s Manual for additional limitations and details.

1. The TSS Pre-Collision System is designed to help avoid or reduce the crash speed and damage in certain frontal collisions only. It is not a substitute for safe and attentive driving. System effectiveness is dependent on road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details.

2. The Pedestrian Detection system is designed to detect a pedestrian ahead of the vehicle, determine if impact is imminent and help reduce impact speed. It is not a substitute for safe and attentive driving. System effectiveness depends on many factors, such as speed, size and position of pedestrians, and weather, light and road conditions. See Owner’s Manual for additional limitations and details.

3. Automatic High Beams operate at speeds above 25 mph. Factors such as a dirty windshield, weather, lighting and terrain limit effectiveness, requiring the driver to manually operate the high beams. See Owner’s Manual for additional limitations and details.

4. Dynamic Radar Cruise Control is designed to assist the driver and is not a substitute for safe and attentive driving practices. System effectiveness is dependent on road, weather and traffic conditions. See Owner’s Manual for additional limitations and details.

5. Lane Departure Alert with Steering Assist is designed to read lane markers under certain conditions. It provides a visual and audible alert, and slight steering force when lane departure is detected. It is not a collision-avoidance system or a substitute for safe and attentive driving. Effectiveness is dependent on road, weather and vehicle conditions. See Owner’s Manual for additional limitations and details.

Supervised driving log

A parent, legal guardian or responsible adult 21 years of age or older, must certify that the driver has had at least 50 hours of driving experience, of which 10 hours must be at night. The Supervised Driving Log on the following page should be used to keep track of practice driving time. You can also use the Log to assure your teen is practicing in a variety of driving environments and weather conditions. When your teen goes to get their Class E Driver License, you will have to sign a certification that the required supervised training has been completed.

Looking ahead

**Goal:** Teach your teen to develop defensive driving techniques and higher-level visual and anticipatory driving skills before moving on to more complex driving situations. In order to avoid last-second reactions and spot potential hazards, have your teen always look 12–15 seconds down the road. When they are looking far enough ahead, they will be able to spot hazards early and be well prepared to react to them.

**Location:** Start on a quiet neighborhood street. Out of respect to our neighbors, please do not use official state road test courses for practice. Move onto a road with light traffic when your teen is ready.

**Lesson one – SIPDE system**

Teach your teen the SIPDE system, a simple system to help new drivers recognize, anticipate and avoid risks before they turn into problems. SIPDE stands for:

- **Scan** continually for immediate and potential hazards.
- **Identify** potential risks, like oncoming vehicles, pedestrians, obstacles, or intersections.
- **Predict** when and where there will be a conflict or problem.
- **Decide** on the best course of action.
- **Execute** that action.

Have your teen use commentary driving as they practice the SIPDE system. As they drive, ask them to verbally describe their thoughts and actions while they scan the area in order to identify potential risks they see, predict problems these risks could cause, decide what to do to avoid these problems, and then execute the maneuver.

**Lesson two – stopping-distance rule**

Teach your teen the stopping-distance rule, for the safest distance to stop behind another vehicle. When your vehicle stops, you should be far enough away from the car in front of you that you can see where its tires make contact with the ground. Any closer is too close.

**Lesson three – four-second rule**

Teach your teen the four-second rule for the appropriate following distance when driving behind other vehicles in clear, dry weather. The four-second rule is an important safety measure designed to give drivers enough time to safely steer or brake to avoid problems that occur in front of them on the road. Additional time is beneficial in bad weather, at night or otherwise to stop safely.

- Start counting when the rear bumper of the vehicle in front of you passes an object.
- Count “one thousand ONE, one thousand TWO, one thousand THREE, one thousand FOUR.”
- Your front bumper should not pass that same object before you’ve reached “four.”

Have your teen practice the four-second rule at least 10–12 times, counting out loud to check whether their following distance is appropriate.

---

**Don’t tailgate**

Rear-end collisions are the most common form of a car crash. Emphasize to your teen that increasing following distance behind other vehicles is the single best thing they can do to minimize the risk of a crash.

**Skill completed**

---

Your front bumper should not pass before you’ve reached “four.”
Turning around

Goal: Teach your teen the best ways to turn a vehicle around in various circumstances.

Location: Start on a quiet neighborhood street with accessible driveways. Please be respectful of neighbors and private property. Move to a multi-lane road for U-turns, if legally allowed in your area.

Lesson one – turning around safely

Start by coaching your teen that the safest and easiest way to turn around is to drive around the block. The less backing up, the better! Since that’s not always possible, it’s important to practice other ways to turn around.

Lesson two – three-point turns

This more challenging turn should only be done when there is no available driveway. Three-point turns block both sides of a two-lane road, so coach your teen to make absolutely sure that the traffic is clear in both directions:

1. Pull as far to the right as possible to maximize room to maneuver.
2. Turn sharply across the road until the car is perpendicular, facing the curb.
3. Continue checking for traffic in both directions.
4. Put the car in reverse and back up, turning sharply in the other direction, into the original lane, but now facing the opposite direction.
5. Shift into drive and pull forward into the correct lane, driving straight ahead.

Practice three-point turns at least 10 times each.

Lesson three – U-turns

First explain that U-turns can be very dangerous, and should only be done where they are legal.

1. Begin the U-turn in the left lane, closest to the center line or median.
2. Be sure there is enough room to make the turn without hitting the curb or any parked cars.
3. Signal to indicate the direction of the turn, checking carefully for oncoming traffic.
4. Move forward, turning the wheel sharply to turn around.
5. Finish the U-turn in the opposite direction and accelerate to an appropriate speed.

Backing up

As a general note, when you back the vehicle up and you are properly positioned in the driver seat, with your left hand on the steering wheel at the 12 o’clock position, the way you move your hand is the way that the rear of the vehicle will move.

#RoadReady
Parking – part one

**Goal:** Teach your teen to master angle and perpendicular parking.

**Location:** Start in large, level, mostly empty areas. You will need angled and perpendicular spaces.

Before your teen starts parking practice, review “Skill three: How close are you?” and “Skill four: Backing up.”

**Lesson one – angle parking**

The gentler turn makes this the easiest type of parking for new drivers.

**Hint:** Choosing a parking spot on the left side of the car can provide more room to maneuver and a better view of traffic when backing out.

- Signal to indicate intent to turn into a parking space.
- Move forward until the steering wheel is aligned with the first pavement line marking the space.
- Look at the middle of the parking space and turn the wheel sharply at a slow, controlled speed.
- Steer toward the center of the space, straightening the wheel upon entry.
- Stop when the front bumper is six inches from the curb or from the end of the space.
- After you’ve parked, set the parking brake, put the gear in park for automatic transmissions (for manual transmissions, put the car in first or reverse). Shut off the ignition and remove the key. Check for traffic prior to getting out. Lock the doors.

**Lesson two – perpendicular parking**

The steps are the same as angle parking, but the sharper turn into perpendicular spaces may require more practice.

**Lesson three – exiting spaces**

- With a foot on the brake, shift into reverse, which will signal that you will be backing up.
- Turn around to look for oncoming traffic.
- For **angled spaces**, back up straight until the driver’s seat is even with the bumper of the next vehicle on the turning side. For **perpendicular spaces**, back up straight until the windshield is aligned with the bumper of the next vehicle.
- Quickly turn the wheel in the direction that the rear of the car needs to go.
- Glance forward to make sure the front bumper is clear of the car on the other side.
- When the front bumper clears the other vehicle, stop, shift into drive, and pull forward to complete the exit.

---

**Practice makes perfect**

Plan to spend a good amount of time on parking practice with your teen — it’s a difficult skill to learn. Many crashes happen in parking lots, and mastering parking skills is an important way to help avoid collisions. Have your teen practice angle and perpendicular parking 15–20 times each.

---

**Skill completed**

supervisor initials

driver initials

#RoadReady
Parking – part two

**Goal:** Teach your teen to master parallel parking.

**Location:** A street with marked parallel parking spaces at a time of day when traffic is light.

**Lesson one – parallel parking**

Parallel parking is a difficult maneuver for new drivers, so patience is key. Many drivers never learn to do it well, especially in areas where it’s not common. Because of the difficulty of learning parallel parking, and because there are several different teaching methods, this skill is sometimes best taught by a professional driving instructor. Assess your own parallel parking skills and your teen’s abilities before beginning.

- Select an available space on the passenger’s side of the car.
- Signal when approaching the space and check mirrors for traffic behind the vehicle.
- Move forward past the space until lined up directly parallel to the car parked in front, 2–5 feet away. Being too close or too far away will make parking more difficult.
- With a foot on the brake, shift to reverse and turn around to check for traffic and make sure the travel path is clear.
- Release the brake, start backing up slowly, and start to make an “S” turn, turning first right and then left.
- Glance both forward and backward repeatedly to check the space around the car while turning.
- Once the rear of the car is mostly in the space, start turning in the other direction to straighten out.
- Adjust the vehicle’s position as needed to center it in the space.
- When parking on a public road, you must not park more than 12 inches (1 ft.) away from the curb. If not, pull out and try again.
- Always check for passing vehicles and cyclists before you open your door.

**Lesson two – exiting a parallel parking space**

- With a foot on the brake, shift to reverse, turn around, and back as close as possible to the vehicle behind you.
- Check for traffic, signal, and shift into drive.
- Make sure the travel path is clear, then move slowly forward while steering rapidly out of the space.

**Lesson three – parallel parking on a hill**

Set the parking brake. Make sure the vehicle is in park for automatic transmission (for manual transmissions, put the car in first gear if parking uphill or in reverse if parking downhill). To prevent the vehicle from rolling into traffic, instruct your teen to turn the front wheels as follows:

- Toward the curb when parking downhill
- Away from the curb when parking uphill

If there is no curb, have your teen point the wheel so that the car would roll away from traffic if it moved.

**Have patience**

When practicing parallel parking, your teen will probably hit the curb several times. Tell them not to worry — even the best parallel parkers do this often. Coach them to pull out of the space and try again, adjusting their turning angle as needed.

**Skill completed**

#RoadReady
Multi-lane roads – part one

Goal: Teach your teen to drive safely and with confidence on busier, more complex, multi-lane roads.

Location: A busier, multi-lane road. Choose a time with limited traffic, such as a weekend morning.

Skill review

By now, your teen should be comfortable driving on quiet roads. Before starting multi-lane road practice, it’s important to review some key information from previous lessons. The following skills are crucial to safe driving on busier, more complicated roads.

Lesson one – mirror positioning, monitoring and blind spots

Refer to Skills one and two. Clearly seeing the adjacent traffic is especially important on multi-lane roads. Remind your teen to check the mirror positions when entering the car, and to constantly monitor the traffic around them.

Lesson two – stopping distance

Refer to Skill six. Remind your teen that when stopping their vehicle behind another one, they should be far enough back to see where the other car’s tires meet the road. Additionally, remind your teen that if they stop their vehicle too close to the vehicle in front of them and are struck from behind and subsequently strike the vehicle in front of them, the teen will get a ticket also.

Lesson three – following distance

Refer to Skill six. Review the four-second rule with your teen, emphasizing that increasing following distance is the single best way to reduce crash risk. This gives the driver visibility, time, and space to avoid crashes.

Lesson four – safe lane changing

First, coach your teen not to change lanes unnecessarily. Studies show that while it may not look like it, most travel lanes flow at around the same rate. Changing lanes in an effort to save time doesn’t actually save time, but it does increase crash risk.

Ask your teen to list valid reasons to change lanes. Good answers include: to make a turn, to avoid an obstacle, to exit the road, to park, or to pass another vehicle.

Have your teen practice these lane change steps 15–20 times:

- Check traffic to the rear and the sides for an appropriate gap.
- Signal to indicate intention to change lanes.
- Do not exceed the speed limit.
- Recheck traffic, including a glance over the shoulder at the mirror blind spot area.
- Maintain speed or accelerate slightly before and during the lane change making sure to not exceed the speed limit.
- Gradually move into the new lane.
- Adjust following distance, using the four-second rule.
- When you pass a bicyclist, you must give them three feet of clearance to the side. Do not drive in the lane occupied by a bicyclist. A bicyclist is entitled to the whole lane if the lane is too narrow for both a car and a bicycle to share or when indicated by pavement markings or road signs.

Other road users

Motorcycles, bicyclists, and pedestrians are more difficult to see than cars because they are smaller — and drivers tend to focus on looking for cars. Traffic, weather, and road conditions require cyclists to react differently than motorists. It can be difficult to judge and predict their actions. Always give motorcyclists and bicyclists a wide berth and reduce your speed.

#RoadReady
Multi-lane roads – part two

Goal: Teach your teen to drive safely and with confidence on busier, more complex, multi-lane roads.

Location: A busier, multi-lane road. Choose a time with limited traffic, such as a weekend morning.

Lesson one – right turns

Right turns are always made from the right lane of the current road to the first, open lane of the new road. Look for signs and signals that indicate whether “right on red” is allowed. Practice right turns 10–12 times before moving on to left turns.

Lesson two – left turns

Left turns should almost always begin and end in the closest lane to the right of the yellow line which is separating opposing traffic. Choose a steering path in the middle of the closest lane to the right of the yellow line.

There are three types of left turns:

- **Protected left turns** with a designated left turn lane and left turn signal
- **Semi-protected left turns** made from a center or shared turn lane
- **Unprotected left turns** made from an active travel lane

Protected left turns should be made from the designated lane when the left turn signal displays a green arrow.

For semi-protected and unprotected left turns, coach your teen on these steps:

- Make sure the vehicle is in the correct lane to make a left turn.
- Signal the turn and begin slowing down at least 100 feet from the intersection.
- Move carefully into the intersection. Don’t turn the wheel until you’re ready to make the turn.
- Yield to any vehicles, bicycles, or pedestrians.
- When there is sufficient space with no oncoming traffic, move ahead into the turn.
- Choose a steering path line in the middle of the closest lane to the right of the yellow line.

Lesson three – safe passing procedures

Discourage your teen from passing other cars unnecessarily. If passing is necessary, the following steps should be observed:

- Position your vehicle more than four seconds behind the vehicle to be passed.
- Check mirrors and blind spots for oncoming traffic.
- Check the passing lane ahead to make sure there’s plenty of space before you try to pass.
- Signal intent to pass and accelerate quickly to match the speed of traffic flow, but do not exceed the posted speed limit.
- While passing, monitor the space in front of and behind your vehicle and check the rearview mirror for the front of the car being passed.
- When you see the front of the passed car in the rearview mirror and your vehicle is well clear, signal intent, gently and slowly move back to the original lane, cancel the signal, and maintain speed.

Making left turns

Left turns are one of the hardest maneuvers for teens to master. Be patient. New drivers often have difficulty judging the speed and distances of multiple lanes of oncoming traffic. Practice judging oncoming vehicles’ distance from your vehicle by counting out loud the time it takes for them to reach your car from a designated point.

Don’t turn the wheel until you’re ready to make the turn.

#RoadReady
City driving – part one

Goal: Teach your teen to drive safely and confidently in the complex environment of city driving. 
Note: City driving takes hundreds of hours, if not several years, to master.

Location: Busy, urban streets. Start at times when traffic is light, moving on to heavier traffic times as your teen gains skill in this situation.

Skill review
Since the busy, crowded environment of city driving is challenging for new drivers, this is a good time to review key driving skills. The most important skill for drivers is the ability to make good decisions. City driving forces drivers to make lots of decisions quickly. The three things they need to drive safely in the city are:

• Visibility: To see potential problems in all directions
• Space: To maneuver around obstacles and avoid hazards
• Time: To anticipate risks and make adjustments to speed or position

Lesson one – maximizing visibility and space
As you practice, have your teen focus on making decisions that will maximize visibility and space around the vehicle, increasing the available reaction time.

• Looking ahead (refer to Skill six): Congested city driving leaves very little room for error. Identifying and anticipating potential problems is crucial.

• Covering the brake: Coach your teen that when they spot a hazard, they should “cover” the brake by taking their foot off the accelerator and holding it over the brake. This will prepare them to slow down or stop suddenly. Make sure they don’t “ride” the brake. Riding the brake confuses other drivers and puts unnecessary wear on the brakes.

Lesson two – identifying hazards
As you begin city driving practice, have your teen drive through several blocks to identify and name common hazards on busy, congested streets. Ask them to describe how they will safely deal with each hazard they identify.

Such hazards may include:

• Parked cars, cars entering or exiting parking spaces, and car doors opening
• Delivery trucks stopping suddenly, with drivers racing to and from the trucks
• Buses making frequent stops, loading and unloading passengers
• Blind alleys, with cars or cyclists darting out
• Pedestrians and cyclists moving unpredictably, crossing streets illegally, etc.
• Limited visibility and intersections spaced at shorter intervals
• Aggressive drivers competing for lane space and parking spots
• Stop-and-go traffic flow
City driving – part two

**Goal:** Teach your teen to drive safely and confidently in the complex environment of city driving.

*Note: This is not a goal that will be achieved in a single session. Spend as much time as possible with your teen practicing safe city driving skills.*

**Location:** Busy urban streets. Start at times when traffic is light, moving on to heavier traffic times as your teen gains skill in this situation.

**Lesson one – avoiding obstacles**

**Focus on lane position to avoid obstacles:** City driving involves many circumstances in which travel lanes are shared, congested, and partially or fully blocked. During practice sessions on busy city roads, have your teen identify these steps to safely avoid obstacles:

- Identify right-lane obstacles, such as stopped buses, parked cars, delivery trucks, and cyclists.
- Identify left-lane obstacles, such as vehicles waiting to make a left turn, or cars traveling in the opposite direction drifting over the center line.
- Identify the least-congested travel lane. *Hint: On a three-lane road, this is usually the center lane.*
- Position the vehicle in the lane at the greatest distance possible from any obstacles.

It can be tempting to pass vehicles on congested streets, when obstacles or traffic volume slow traffic. However, this can be dangerous, due to closely spaced intersections, irregular traffic flow, cars entering and exiting parking spots, etc. Coach your teen to avoid passing on busy city streets.

**Lesson two – deadly distractions**

What happens inside the car can be just as dangerous as what happens outside. Engaging in distracting activities while driving can be deadly, especially for young drivers. Ask your teen to list dangerous driving distractions. Their answers should include:

- Talking or texting
- Changing radio stations, or shuffling/streaming music
- Passengers, pets, or objects moving in the car
- Eating, drinking, or smoking
- Searching for an item
- Intense or emotional conversations
- Putting on makeup or looking in the mirror

Coach your teen to avoid distracting activities whenever possible, but especially in busy, congested environments. Remind them to focus on keeping as much space as possible around the vehicle at all times.

**More is better**

City driving skills take a long time to acquire. Spend as much time and drive in as many circumstances with your teen (night, inclement weather) as you are able. Plan trips to less-familiar places where you might not normally travel.

**Skill completed**

driver initials

#RoadReady
Highway driving – part one

**Goal:** Teach your teen highway basics and how to safely enter and exit a controlled access highway.

**Location:** Start on a multi-lane highway with easily accessible exits, at a time when traffic is light, such as a weekend morning. Move on to practice at heavier traffic times when your teen is ready.

**Lesson one – observation**

Have your teen spend some time on highways with you as the driver. Emphasize the importance of looking ahead to anticipate problems, and explain highway features, such as:

- The different kinds of interchanges
- The meanings of highway signs and signals
- The meanings of different lane lines and markings

Teach your teen three rules to remember when driving on a highway:

- Maintain proper speed.
- Create space.
- Always use your signal.

**Lesson two – on-ramp segments**

Explain the three segments of on-ramps, and how they’re used:

- **Entrance area:** Provides time to search and evaluate space, and determine what speed is needed.
- **Acceleration area:** The driver brings the vehicle up to the speed of highway traffic flow.
- **Merge area:** The driver uses this space to merge into the traffic flow.

**Lesson three – merging**

Teach the steps for merging onto a highway:

- Check for on-ramp speed signs.
- At the entrance area, make quick glances at the highway, scanning for vehicles and entry gaps.
- Signal to show intent to enter the highway and adjust speed to match the traffic flow.
- In the merge area, enter the flow of traffic, checking mirrors and blind spots.
- Turn off the turn signal and begin looking ahead to anticipate problems or upcoming lane changes.
- Do not completely stop in the entrance area unless absolutely necessary.

**Lesson four – exiting**

Teach the steps for exiting a highway:

- Identify the exit well ahead of time.
- Scan traffic for problems when approaching the exit, but don’t slow down on the highway.
- Start to signal four to six seconds before reaching the ramp.
- Upon entering the ramp, tap the brakes and begin rapidly reducing speed.
- Slow down to the posted exit ramp speed limit before reaching the curve.

Practice both merging and exiting 10-12 times each, or more if needed for your teen to feel comfortable.
Highway driving – part two

Goal: Teach your teen to maneuver safely in complex highway driving environments at higher speeds.

Location: Start on a multi-lane highway with easily-accessible exits, at a time when traffic is light, such as a weekend morning. Move on to practice at heavier traffic times when your teen is ready.

Lesson one – steering technique

Once on the highway, coach your teen on steering technique. At fast highway speeds, excessive steering can be dangerous and lead to loss of control. Remind your teen to steer gently on highways.

Lesson two – lane changing

In the high-speed, complex highway environment, lane-changing skills are very important. Have your teen spend several miles practicing the lane-changing and passing skills previously learned in “Skill nine: multi-lane roads,” until they are comfortable performing them at highway speeds. Remind your teen to:

- Watch for merging vehicles and move one lane left to make space for them when needed.
- Change lanes one at a time only.
- Watch mirrors for tailgaters and move to another lane to let them pass.
- Change lanes to move around any stopped vehicle with flashing lights, or vehicles stopped on the shoulder. Unless it’s absolutely necessary, never stop on the shoulder of a highway.

Lesson three – four-second rule

Review the four-second rule for following distance, learned in “Skill six: looking ahead.” Additionally, coach your teen to use a four-second rule for these highway driving circumstances:

- Merging onto a highway
- Changing lanes
- Exiting a highway

Lesson four – challenging road conditions

Coach your teen to adjust travel speed and vehicle position based on weather and road conditions. Once your teen is comfortable with and proficient at highway driving in good conditions, spend some practice time on highways under more challenging conditions, such as rain. Coach them to always use appropriate caution, as conditions can change quickly.

Lesson five – road trips

Consider planning some short day trips with your teen to a destination two to three hours away. Have them drive there and back. Find an event or place that you will both enjoy and have fun.

Higher order

Early in the training process, parental instruction tends to focus on vehicle handling. As your teen’s skills improve, try to focus on “higher order” instruction, such as scanning ahead, hazard detection, and anticipating the other driver’s behavior.

Skill completed

supervisor initials

driver initials

#RoadReady
Roundabouts

Goal: Teach your teen how to enter and drive roundabouts safely.

Location: A road that leads to a one-lane roundabout. Move on to practice at multi-lane roundabouts when your teen is ready.

Roundabouts are circular intersections designed to calm traffic, increase safety, reduce stop-and-go travel, and decrease traffic delays. Roundabouts have proven to be an efficient means to move traffic through congested intersections and have shown to reduce crashes by half (all but eliminating the more severe broadside and head-on collisions). Roundabouts also offer a safe environment for pedestrians, who only have to navigate one-way traffic flow.

Driving in a roundabout can be intimidating, but it’s really quite simple when you know how it works.

Lesson one – five easy steps

• Slow down: Speeds of 15 mph or less are adequate in the roundabout.
• Yield: Vehicles must yield to the traffic in a roundabout.
• Don’t stop: Never stop once inside the roundabout. The vehicle in the roundabout has the right of way.
• Follow signs: Look for destination signs and exit in that direction.
• Exit: Look to your right, check your mirror and use your turn signal.

Lesson two – emergency vehicles

• If you have not entered the roundabout, pull over and allow emergency vehicles to pass.
• If you have entered the roundabout, continue to your exit, then pull over and allow emergency vehicles to pass.
• Avoid stopping in the roundabout.

Lesson three – multi-lane roundabouts

• As you approach, observe the signs and arrows to determine which lane to use before entering.
• Black and white signs on the side of the road and white arrows on the road will show the correct lane to use.
• If you want to make a left turn, stay in the left lane or other lanes that are signed and marked as a left turn.
• To make a right turn, stay in the right lane or other lanes that are signed and marked as a right turn lane.
• If you want to go straight, observe the signs and arrows to see what lane is correct.

This example shows the traffic movement patterns through a one-lane roundabout. The one-lane roundabout is known as one of the safest and most efficient intersections.
Driving on rural roads

**Goal:** Teach your teen to drive safely and with confidence on two-lane rural roads.

**Location:** A two-lane rural road.

**Lesson one - gravel roads**

Gravel roads present their own special road safety challenge; the issue is traction. Driving on loose gravel is harder than driving on pavement because your tires don’t have the traction needed to give you stable control. Slow down, avoid sudden turning, accelerate and brake slowly, and increase your following distance to six seconds. Be particularly aware of gravel “windrows,” piles of gravel near the road edge, used for highway maintenance.

**Lesson two - driving hazards**

**Large/slow vehicles:** Slower trucks, farm vehicles, and road maintenance equipment are likely to make wide turns at unmarked entrances. Use caution and make sure the driver can see your vehicle before passing.

**Sharp drop-offs and gravel shoulders:** One of the most common driving hazards is running off the road. The urge to overcorrect is strong and often results in a serious crash. If you run off the road, follow these steps to ease your vehicle back onto the road:

- Do not turn the wheel; continue driving straight.
- Take your foot off the accelerator.
- Find a safe place to reenter the road.
- Activate your turn signal and reenter the road when it is clear.
- Do not apply brakes until regaining control of the vehicle.

**Restricted visibility:** Trees, cornfields, buildings, and hills can block a driver’s view of oncoming traffic, or traffic entering from the side. Identify blind spots to better anticipate and be prepared for potential dangers.

**Uncontrolled/open intersections:** They are not controlled by yield or stop signs. Use caution, slow down, and be prepared to stop for oncoming traffic. The vehicle on the left should yield.

**Animals:** If unable to stop for an animal crossing the road, do NOT swerve — swerving makes it hard to keep control. The most serious crashes happen when drivers swerve into oncoming traffic or roll into a ditch.

If you see an animal, slow down and be prepared to stop. Always be on the lookout, especially at sunrise and sunset. October and November are peak months for deer crashes. Deer travel in groups; if you see one, look for more.

**Hills and curves:** These are often steeper and sharper on rural roads than on interstate highways. Before reaching the crest of a hill, or entering a curve, slow down, move to the right side, and watch for traffic.

**Railroad crossings:** Always slow down, look both ways, and be prepared to stop. On rural roads, many railroad crossings are marked only with a round yellow ‘railroad crossing ahead’ warning sign and a white X-shaped railroad crossing. There may not be flashing lights, warning bells, crossing gates, or pavement markings.

---

**Gravel slide**

Be ready for skids. A vehicle can become difficult to handle in heavy gravel. If the vehicle starts to skid, release the accelerator or brakes. As you release them, look where you want to go, and steer in this direction.

---

**Skill completed**

#RoadReady
Continuing education

Learning doesn’t stop when your teen has received their license. It’s important to continue teaching and building upon the skills they have learned. As you continue the supervision process, think about these three areas of focus:

• Spend as much time as possible driving with your teen.
• Drive in a wide variety of conditions (weather, time of day, different traffic volumes, etc.).
• Focus on “higher level” learning: scanning ahead, recognizing hazards, and learning to anticipate the behavior of other drivers.

Now that your teen has become proficient in the basic operational skills of driving, it is essential that they be exposed to a wide variety of driving circumstances and conditions. Make a point of finding circumstances to drive with them that they have not yet experienced, and do it for all types of roads – quiet neighborhood streets, multi-lane roads, and highways. Drive with them at different times of the day, in poor weather, and with varying levels of traffic. It’s much better that they experience these conditions with you, rather than alone or with other teens.

Much of what has been discussed to this point has related specifically to the basic skills your teen will need to be a safe driver. Now, your goal is to ensure your teen is thinking intelligently and making the right decisions as a driver. Sometimes after teens become proficient with the basic skills, parents/guardians will often "step back," becoming less involved in their teen's supervision. But there's still a lot to learn; their teen's education is not complete.

Be clear with your teen that the training process is ongoing and that you will continue to provide input into their development so that you both stay in the learning/teaching mode.

Even the best new drivers are likely to make mistakes. These mistakes are great teachable moments for “higher order” instructions. So instead of saying, “Stop sooner,” advise your teen to try to focus on looking ahead and anticipating events, with an emphasis on good judgment, good decision making, and hazard perception. The shift from a basic comment to a more advanced focus is perhaps the most essential element of educating your teen at this point in the learning process.

As your teen drives, talk to them about specific hazard areas, possible areas of conflict, and blind spots where trouble may hide. Teens tend not to be as good at anticipating these trouble areas as experienced drivers. A good exercise is to have your teen describe the blind spots and possible areas of conflict they see. It will let you know that they are thinking, anticipating, and driving intelligently.

New Vehicle Technology

There is an ever-increasing amount of safety technology in today’s cars. Features like automatic emergency braking, blind spot monitoring, and forward collision warning keep us all safer, but only if they’re used correctly. It’s important to understand how these advanced driver assistance features work and their limitations. A key point is to remember these are driver “assistance” features and not driver “replacement” features.

The easiest way to ensure you’re using everything right is to carefully review your car’s manual. Read about any features that are new to you and make sure you know how they work. If you still have questions, then reach out to the dealership so they can explain. Once you understand the technology, share that information with your teen driver so they understand it, too.

Check out this website for additional information: https://mycardoeswhat.org/safety-features/
Practice in other conditions

For new drivers, it can be challenging to drive in new and unfamiliar conditions such as inclement weather, different times of day, and varying traffic volume. It’s best that you provide guidance before they experience these conditions on their own.

Night driving
A driver’s reaction depends on their vision, which is limited at night. This makes it more difficult to make judgments and see pedestrians, bicyclists and other obstacles. Some tips to keep in mind:
- Glare from oncoming headlights makes it difficult to see. To avoid being temporarily blinded, you should look ahead toward the right side of the road.
- Headlights must be turned on between the hours of sunset to sunrise.
- High beams should only be used when other drivers won’t see them and for speeds over 25 mph, such as on isolated roadways with little traffic. You must use low beams within 300 feet of vehicles in front of you, and within 500 feet of oncoming vehicles.
- To compensate for reduced visibility, drive more slowly and at a greater following distance.

Wet/slippery roads
To reduce risk on wet and slippery roads, coach your teen to practice the following:
- Turn on the wipers as soon as the windshield becomes wet.
- You must turn on your headlights when it is raining; this helps others see you.
- Drive 5 to 10 mph slower than normal and increase your following distance to five or six seconds.
- Be more cautious, and slow down on curves and when approaching intersections.
- Turn the defroster on to keep windows from fogging over.

If you must make adjustments while driving, make sure the road ahead is clear before looking down at the dashboard – and look away for only a second or two.

Hydroplaning
Hydroplaning occurs as a result of water on the road that is deeper than the tire tread. This layer of water reduces friction with the tires and can result in the loss of control. If you can see deep water on the road, reflections on the pavement, or the car ahead leaves no tracks on the water, these are indications your car could hydroplane. Slow down.

Fog
Use low-beam lights or fog lights if your vehicle has them. Don’t use high-beams - they reflect off the fog, causing glare and reduced visibility. Slow down until your speed matches your ability to see, even if it means slowing to a crawl. If visibility is so low that you cannot see, pull completely off the roadway and off the shoulder, turn on your hazard lights and wait until the weather improves. Do not park on the shoulder since you might be hit by someone driving on the shoulder who is using the shoulder as a driving reference. If you stay in the car, keep your seat belt on.

Flat tire
Getting a flat can be dangerous, even at low speeds. If a front tire goes flat, you will hear a loud thumping sound and your vehicle will pull in the direction of the flat tire. If a rear tire loses air pressure, then the vehicle may drift in the opposite direction. Grip the steering wheel firmly to maintain control, take your foot off of the accelerator, and find a clear path to the right side of the road. Signal your lane change and move to the shoulder when clear, letting the vehicle slow down. As you slow, gently apply the brake to bring the car to a stop.

Overconfidence
After becoming proficient in basic driving skills, teens can become overconfident and begin to drive faster, follow too closely, brake abruptly, etc. Gently and continuously remind your teen to stay four seconds back from other vehicles and to always drive with caution.
Teens’ biggest dangers

Newly licensed teens crash much more often than older, more experienced drivers. These are the circumstances that are the most common trouble areas for young drivers.

Not wearing seat belts

The unfortunate reality is that teens buckle up far less than adults. A 2008 study showed that belt use amongst teens is the lowest of any age group, just 76 percent compared to a national average of 85 percent. In fact, the majority (58 percent) of young people 16 to 20 years old who were involved in fatal crashes were unbuckled. Whether sitting in the front or back of a car, buckle up every trip and remind other passengers to buckle up too. It could save their lives, and yours. Please visit NHTSA’s website for more information https://www.nhtsa.gov/risky-driving/seat-belts

Drugs and alcohol

Teens are at far greater risk of death in an alcohol-related crash than the overall population. In 2016, nearly 20 percent of teenagers involved in fatal crashes had been drinking. Marijuana is the drug that’s most commonly found in the blood of drivers who have been in a car crash. It is important to enforce a zero-tolerance policy at home. If your teen uses any alcohol or drugs, they cannot drive, nor should they ride with anyone who has been drinking or using drugs — in any amount. Any driver under the age of 21 who has a BAC of .02 or more will automatically have their driving privilege suspended for 6 months. It is illegal for any teen to possess or consume alcohol in Florida.

Fatigue

As teens get older their bedtimes get later, and waking times often are earlier. From ages 13 to 19, nightly sleep is reduced by 40–50 minutes. Teen drivers who sleep less than 8 hours a night are 33 percent more likely to crash than teens who get more than 8 hours of sleep. This lack of sleep results in depressive moods, more risk-taking behaviors, and lower grades. It further reduces a person’s ability to process information, be attentive, and have good reflexes, which are all crucial to safe driving. Studies have shown that being awake for 18 hours has a similar impact to having a blood alcohol content (BAC) level of 0.08.

Distracted driving

A driver’s primary responsibility when behind the wheel is to focus on the act of driving. Any behavior that distracts from that activity increases the risk of a collision. In this age of electronic communication, the dangers of distractions have increased significantly. Use of electronic devices for any purpose, to send or receive communications, to surf the web, to view images, video, or anything at all, should absolutely be avoided. Texting while driving is illegal in Florida.

Inexperience

Just as it takes years to perfect any skill — athletic, artistic, or otherwise — it also takes years to be a truly good driver. Until teens are much more experienced, they run a greater risk of crashing, being hurt, and potentially dying. A driver’s license makes them a legal driver. Experience makes them good drivers.

Night driving

For teens, the most severe crashes occur at night and on weekends. Night driving is challenging for all drivers, but novice drivers do not have the experience to anticipate and react when visibility is reduced. When teens drive at night, it is more often with a lack of adult supervision, with other teen passengers, and at higher speeds — all of which are factors that increase risk.

Drowsy driving

Staying alert means focusing on the road and not driving when fatigued. Review signs of drowsy driving, such as difficulty focusing, frequent blinking, or drifting from your lane. Remind your teen to take a break after driving for 2 hours, or after 100 miles. Teens should avoid driving at times they would normally be sleeping. Always increase following distance at night.

Other teens

Research is clear on the fact that risky teen driving behaviors increase in the presence of teen passengers. The more kids there are in the car, the stronger the likelihood of a crash. This is the primary reason many states have passed laws that restrict the ability of teens to drive with their peers.
Sharing the road with trucks

When driving on the highway, you are at a serious disadvantage if involved in a crash with a larger vehicle. In crashes involving large trucks, the occupants of a car — usually the driver — sustain 78 percent of fatalities.

In order to keep you and your teen safe on the road, you should be extra cautious when driving around large trucks and buses. Sharing the road with larger vehicles can be dangerous if you are not aware of their limitations. Here are a few tips to help you drive safer to prevent a crash and minimize injuries and fatalities if one does occur.

Cutting in front can cut your life short

If you cut in front of another vehicle, you may create an emergency-braking situation for the vehicles around you, especially in heavy traffic. Trucks and buses take much longer to stop in comparison to cars. When passing, look for the front of the truck in your rearview mirror before pulling in front, and avoid braking situations.

Watch your blind spots – the “no-zones”

Large trucks have blind spots, or “no-zones,” around the front, back, and sides of the vehicle. These no-zones make it difficult for the driver to see. Avoid being caught in a truck’s no-zones. If you can’t see the truck driver in the truck’s mirror, the truck driver can’t see you.

Avoid squeeze play

Be careful of trucks making wide right turns. If you try to get in between the truck and the curb, you’ll be caught in a “squeeze” crash. Truck drivers sometimes need to swing wide to the left in order to safely negotiate a right turn. They can’t see cars directly behind or beside them. Cutting in between the truck and the curb increases the possibility of a crash. So pay attention to truck signals, and give them lots of room to maneuver.

Work zones

Work zones can be very dangerous, especially when traveling on the highway. It’s important to be alert and prepared to slow down or stop in a work zone. Slowing down and allowing others to merge will ensure a safe passage through work zones. Here are a few tips on work zone safety:

• **Stay alert and follow posted speed limits:** Work zones are busy places where construction vehicles and workers are always moving. Be alert, and stay on the safe path that is designated throughout the work zone. Remember: speed limits are reduced in work zones for a reason. Signs will indicate where speeding fines will be doubled when workers are present.

• **Take your cues from trucks:** Work zones often pop up suddenly. If you are not paying attention to the signs, you could find yourself in a serious crash. Since trucks have a height advantage and can see ahead of traffic, their brake light activity can provide a good signal of a slow-down or work zone ahead. Truck drivers know the stopping limitations of their trucks and pay close attention to traffic.

• **Merge gently:** Aggressive drivers can be extremely dangerous while driving in work zones. Work zones require time and courtesy. For a smooth passage through work zones, allow others to merge in front of you. Be especially considerate of trucks. They require more space to merge and are the least maneuverable vehicles on the road.

• **Safe distance:** Leave extra space between you and the vehicle in front of you, and keep a safe distance between you and workers on or near the roadway.

• **Hands-free phone use only:** Florida law requires that wireless communication devices can only be used in a hands-free manner when driving in an active work zone.

Speed is everything

When driving in highly trafficked areas, like urban and town centers, as well as arterial roads, your speed can be a matter of life and death for you, fellow motorists, cyclists, and pedestrians. Follow speed limits and respect all road users.
Sharing the road with bicyclists and pedestrians

- **Scan the street for wheels and feet**: Be especially careful to look for people walking and biking before turning at intersections and driveways.
- **Yield to pedestrians**: Pay attention to the pedestrian signal and give people walking the right-of-way.
- **Double threat**: Never pass another vehicle that has stopped or is slowing down for a pedestrian. Remember, you might not be able to see the pedestrian when you approach a stopped vehicle so be aware.
- **Watch for bikes**: People riding bicycles have the right to be on the road (and are often prohibited from riding on sidewalks), so respect their right to be there.
- **Passing safely**: Stay at least 3 feet away from bicyclists (and other vulnerable road users, such as garbage collectors, police officers, and tow truck operators) when passing, and don’t return to the right until well clear of the person. If there isn’t enough room to safely pass in the same lane, you must use another lane or wait for a safe opportunity to pass. Do not pass a person on a bike and then immediately turn right.
- **Avoid the “right hook”**: Look for and you must yield to people biking on the right when turning right.
- **Avoid the “left cross”**: Look for and you must yield to people walking across the street and yield to oncoming people on bikes when turning left.
- **Visibility**: Look for bicyclists at night and watch for their reflectors or lights.
- **Check blind spots**: Watch for bicyclists coming from behind, especially before turning right.
- **Doors are dangerous**: Before opening your car door, look in your mirror and physically turn your body to make sure no bicyclists are coming. Lowering speeds can save lives

Parent/teen sample contract

Item 1: Driving Hours
Remember that until the age of 18, driving hours are limited in accordance with the graduated licensing law (see page 11). You may decide to further restrict these hours.

Parent/Teen Agreement:
Consequence:

Item 2: Passengers
We strongly encourage you to limit teen passengers. The facts are clear that the more teen passengers, the greater the chance for crashes to occur.

Parent/Teen Agreement:
Consequence:

Item 3: Driving Violations/Tickets
Teens are expected to obey all traffic laws. If they don’t, who will pay the ticket? What other consequences will there be? Many parents remove all driving privileges for a period of time, determined in part by the severity of the offense.

Parent/Teen Agreement:
Consequence:

Item 4: Safety Belts
Law requires safety belt usage. Make your teen responsible for requiring everyone in the vehicle to buckle up. There should never be more passengers in the car than there are seat belts. Have your teen state that they understand that the seat belt law is a primary enforcement law which means that the police can stop their vehicle if anyone is not properly secured and the driver gets the citation for all those under 18 who are not properly secured by a safety belt or child safety seat.

Parent/Teen Agreement:
Consequence:

Item 5: Vehicle Responsibilities
If teens are driving a family car (which we recommend for at least a while), will they help pay for maintenance and gas? If they damage the car, will they be responsible for repairs? What other consequences will there be? How will these issues be handled if they occur in their own vehicle?

Parent/Teen Agreement:
Consequence:
Item 6: Unacceptable Driving Behaviors/Activities
These include any activity where the driver takes his/her eyes off the road and/or takes one or both hands off the steering wheel when the car is not in park or turned off. Common distracted behaviors include: talking and texting on a cell phone, eating, applying makeup, reading and any type of horseplay.

Parent/Teen Agreement:
Consequence:

Item 7: Weather Conditions
In Florida, we can’t always avoid a thunderstorm, but teens (really all drivers) should avoid driving in any severe weather. It is best to wait until the storm passes. As a teen begins to learn to drive, you may want to only allow driving during dry conditions.

Parent/Teen Agreement:
Consequence:

Item 8: Trip Plan
Teens should drive with a purpose in mind and not just go for a ride. We strongly suggest that you require your teen driver to check in each time they drive and give you detailed information about where they are going, when they will return and who they are with.

Parent/Teen Agreement:
Consequence:

Item 9: Other
You may wish to include other issues in the contract, such as grades and family responsibilities like picking up a sibling from after school activities.

Parent/Teen Agreement:
Consequence:
Before they drive off into adulthood.

When your kids start driving, you suddenly realize how close they are to becoming adults. State Farm® is here to help with teen driver programs and additional savings for safe driving. Talk to an agent or get a quote at statefarm.com®.

Like a good neighbor, State Farm is there.®
