WANT TO HARVEST A BIG BUCK? START BY HARVESTING A DOE...
With antlerless deer harvest trending downward the past few years, hunters are urged to take advantage of the state’s more liberal bag limits and more open days for antlerless harvest. There are several benefits to additional antlerless harvest, and the most notable is a more even buck-to-doe ratio. Healthier deer, better hunting and better antler development all begin with a more even buck-to-doe ratio.

In addition to increased opportunities for antlerless hunting, the Wildlife Department’s Deer Management Program (DMAP) helps landowners intensively manage deer herds on private land. It is designed to give cooperators -- whether landowners, hunt clubs or lease operators -- extra assistance in managing deer. Under the program, cooperators set their own management goals ranging from producing maximum numbers of harvestable deer to producing trophy bucks. Because it is very difficult to manage deer and achieve realistic goals on small parcels of land, a minimum of 1,000 acres is required. Potential applicants with less than 1,000 acres may combine lands with adjoining landowners to meet the required minimum.
